

ABSTRACT

Azizah. Faiqatul. 2016. Lexical Relation found in A script movie “An Education” by Nick Hornby. English Department, Faculty of Arts and Humanities, State Islamic University Sunan Ampel Surabaya.

Advisor : Dr. Mohammad KurjumM,Ag

Key Term : Lexical Relation, Movie Script, and Saeed's Theory

This analysis focused on analyzing the classification of words that have relationship each other and how the conceptual meaning of them. The relationship could be called as lexical relation. The researcher limits this study to use six types from eight types of lexical relation. They were homonym, polysemy, synonym, antonym, hyponym and meronym. The researcher found 12 pairs of antonym, 11 pairs of synonym, 9 words of hyponym with 4 words superordinate, 5 words are homonym, 4 words are polysemy and 3 words are meronym. There are four conceptual meanings of six lexical relations. First, all of the data are kinds of lexical relation. Secondly, classification of the sound and spell of words found in homonym and polysemy. Thirdly, the classification of the sameness and opposite meaning of words found in synonym and antonym. Fourth, using hierarchical diagram and classification in part of whole and kinds of something.

The researcher analyzed lexical relation in a movie script *An Education* by Nick Hornby that adapted by personal experience of Lynn Barber. This study used descriptive qualitative approach to collect and analyze the data. This study used theory of Yule (2006) and Saeed (1997). Finally, the researcher hope this study can give contribution for readers who want to learn lexical relation.
